

GALAXY™ WATER TANKS

GALAXY™ Water Storage Tanks are offered in capacities ranging from 5,000 gallons up to 600,000 gallons. GALAXY™ Rural and Agricultural Tanks are pre-engineered and readily available from stock. A commercial GALAXY™ Water Tank can be easily customized to meet the specific application and location for where it will be operating.

THE GALAXY™ ADVANTAGE

GALAXY™ Water Tanks have many advantages over traditional water storage solutions:

- A single GALAXY™ Water Tank provides more benefits than traditional multiple tank farms without the need for multiple purchases, deliveries, site preparations, and piping and plumbing costs.
- By protecting the NSF approved inner polyethylene liner with a profiled steel shroud, adverse affects of exposure to direct sunlight, such as algae and bacterial growth, UV destabilization and heat, are eliminated.
- GALAXY™ Water Tanks have been extensively tested and demonstrated to be resistant to direct flame. ([Test results and videos available upon request](#)).
- GALAXY™ Water Tanks are built in compliance with current building codes. In-house engineers are committed to providing site-specific tank and foundation design to ensure maximum investment ROI and water security for customers.
- GALAXY™ Water Tanks combine the structural benefits of steel and corrosion resistant properties of plastic by utilizing NSF approved membrane liners to prevent any water contact with the steel surfaces.

MODERN

- GALAXY™ Water Tanks offer advanced multi-layer reinforced polyethylene liners that are internationally renowned for their high strength properties.
- Coated at mill instead of on-site, which minimizes handling and 3rd party application issues.
- GALAXY™ Water Tanks' V8-80 profiled steel shell combined with proprietary, fully enclosed bolt cap struts set the standards for the next-gen in bolted steel tank design.
- GALAXY™ Water Tanks are pre-engineered to meet International and National Sanitation Foundation (NSF) standards for potable water applications.

COST EFFECTIVE

- Profile reinforced steel translates into lower costs.
- Easy transportation and quick assembly saves on equipment and labor requirements.
- Pre-engineered to meet most building code requirements, including earthquake zones and hurricane regions, resulting in production and installation savings.
